Hiring Manager

IT Department

October 22nd, 2023

Dear Hiring Manager,

I am a certified full stack developer with CompTIA A+ certification making a path into the IT/Cybersecurity field. I am working to land my first paying job in the field. I hope to establish a lucrative career in IT after gaining experience and mastering the skills necessary to become efficient in IT and Cybersecurity. Prior to learning web development, I had worked as an apprentice in an electrician union. My first job as an apprentice was at UCSD working on the Theatre District Learning and Living Neighborhood site. While there, I learned many things useful in a tech field such as: an adequate understanding of how to wire data cables, how to work diligently and efficiently in a relaxed environment without the need of supervision, and how to solve problems in ways outside of the ordinary methods.

My current job involves interning at a computer repair shop in San Diego. The job involves talking with customers to find the problems they are dealing with, building PCs, repairing hardware and software issues of any computer or laptop that is checked in, using Memtest and furmark to troubleshoot gpu and memory issues, and swapping data from HDDs to SSDs. On the side, I am messing with virtual box and learning about active directory and azure. Currently, I am working towards obtaining my Network+ certification.

Thank you for offering your time and this opportunity. I am looking forward to hearing from you.

Sincerely,

Matthew Sartor
