UCSD Bootcamp

Fullstack Web Developer

June 21<sup>st</sup>, 2023

Dear UCSD Bootcamp,

I am a recently certified full stack developer making a path into the web development profession. I am working to land my first job in the field or internship paid or unpaid. I hope to, in the future, establish a lucrative coding career after gaining experience in the field and mastering the skills necessary to become an efficient web developer. Prior to learning web development, I had worked as an apprentice in an electrician union. My first job was at UCSD working on the Theatre District Learning and Living Neighborhood site. While there I learned many things useful in a tech field such as:

- An adequate understanding of how to wire data cables.
- A good sense of working diligently and efficiently in a relaxed environment where foremen aren't around to monitor your work.
- A good sense of communication and willingness to ask questions as to prevent mistakes and keep others up to date in case a mistake is made.

My time as a health science major helped me to better understand my limits both physically and mentally and how to better apply any lessons I learned. As a health science major, many of the lessons learned were also expected to be demonstrated on a living human being, meaning I had to learn a way to apply my knowledge in a real world scenario that was outside of the book examples. A good instance of this was learning of the issues surrounding pronation and the effect this has on athletes compared to supinators. I appreciate the opportunity to show you what I have learned in my time in college and my previous profession and how it can help to make me an effective worker in your company.

If you believe that I would be a good fit to your company, I have left my information to make it easier to contact me. I am looking forward to hearing from you.

**Thank you for offering your time and this opportunity of a lifetime.**

**Sincerely,**

**Matthew Sartor**
